

CENTRAL MEDICAL WAREHOUSE

For over 30 years CoreFlex™ has provided warehouse management systems to the logistics industry and custom automated pharmacy workflow software solutions to the central fill and mail order pharmacy markets. Now our pharmacy and warehousing expertise has been combined to create LINCS to support your internal pharmacy supply chain.

Link Your Pharmacies into One Internal Supply Chain:

CoreFlex LINCS™ allows you to dynamically link all your pharmacy systems into one internal supply chain to maximize inventory utilization throughout your entire health system. This means that no matter what pharmacy or dispensing systems your locations have; you can keep them in place while achieving a coordinated, unified enterprise-wide view of inventory.

Integrated Warehouse Management Functionality:

Links provides the warehouse management functionality needed to run your central medication warehouse. If you don't have a separate location for the medication warehouse, LINCS allows you to have one of your pharmacy locations perform dual duty by also acting as a logical central medication warehouse.

Custom Workflows for Each Pharmacy Type:

LINCS provides custom workflows that allow you to operate your pharmacy as you choose. Each pharmacy type can have a workflow that works best for them. Your Inpatient pharmacies, Outpatient pharmacies and Clinics are integrated into your Central Med Warehouse in a way that supports their unique operational differences. Our custom workflows also support the high-volume needs of your Central Repackaging Centers and Central Fills locations.

LINCS Provides Your Pharmacy Locations:

- DSCSA scan in and scan out tracking and compliance.
- Easy identification and redistribution of drugs
- Perpetual inventory control based on physical scans of NDCs.
- Automatic financial reporting of inventory and transfers between pharmacies
- Automatic reordering from the warehouse via Internal Transfer Orders.
- Automatic reordering from the wholesaler(s) via EDI.
- Scan Receiving of totes against Purchase Orders.
- Scan Put-Away to stock locations.
- Visibility into totes to identify which tote has an urgently needed drug.
- Visibility of the status of warehouse transfer orders.
- And More...

COREflex

CoreFlex LINCS™ is now available for your Health System. So whether you are looking to add DSCSA tracking, enterprise-wide inventory management or a central medication warehouse for your Health System, make CoreFlex LINCS™ the core of your internal pharmacy supply chain

Contact us to discuss how CoreFlex LINCS™ can transform your internal pharmacy supply chain.
