REDISTRIBUTION OF INVENTORY

LINCS™
Logistics & Inventory Control Solutions
COREflex
Your Internal Pharmacy Supply Chain™

Logistics and Inventory Control Solutions

Enterprise View of Inventory for Redistribution

LINCS integrates with your systems to know where every drug is in real time. With each location having individual reorder points and capacities along with knowledge of daily utilization, LINCS initiates transfers to redistribute overstocked drugs from pharmacies with excess stock to pharmacies that need stock.
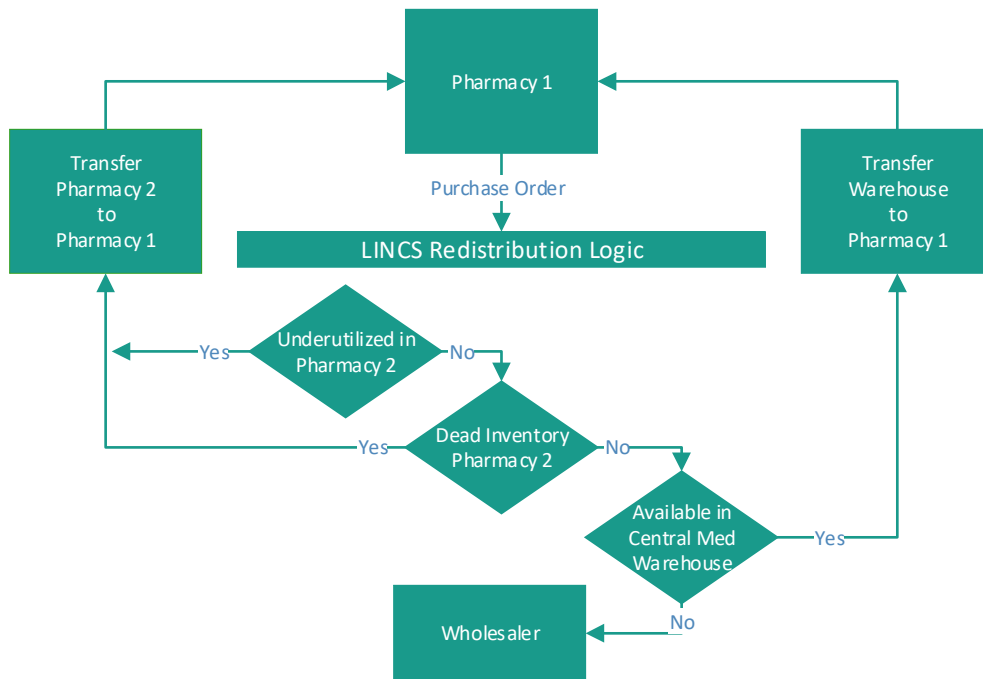

Customized Redistribution Rules for Every Pharmacy Type

Custom redistribution workflows by pharmacy type allow you to automatically check for opportunities to satisfy purchase orders using inventory within your internal pharmacy supply chain.

No need to transfer full cases… LINCS provides Low Unit of Measure transfers.

Dead inventory reports run automatically and initiate transfers to pharmacies that have a demand.

Sample Pharmacy Flow

For over 30 years CoreFlex™ has provided warehouse management systems to the logistics industry and custom automated pharmacy workflow software solutions to the central fill and mail order pharmacy markets. Now our pharmacy and warehousing expertise has been combined to create LINCS to support your internal pharmacy supply chain.

Contact us to discuss how CoreFlex LINCS™ can transform your internal pharmacy supply chain.
